TORNADO SELECT  
HI-SPEED HAND DRYER

HS5710

TORNADO SELECT  
HI-SPEED HAND DRYER

## a fast drying time from an economical unit

The HS5710 TORNADO SELECT high speed hand dryer with selectable hot or cold air flow, is an ideal solution for demanding commercial applications where a fast drying time is required from an environmentally-friendly unit. Robustly constructed from steel, the HS5710 has a 550W fan motor and a selectable 1250W heating element with auto-resetting thermal protection.

*Available in white or stainless steel.*

### features

- | 550W Low Energy
- | fast 10-second drying time
- | hi-speed: 90m/s air speed (200mph)
- | fully automatic operation
- | LED 'function' light
- | selectable 1250W heating element (1800W)

Often, people give up trying to dry their hands with conventional hand dryers as they simply take too long.

The TORNADO 2 and TORNADO SELECT dry hands completely in under 10 seconds.

### Simple to use

To dry, wet hands are placed into, or under the Tornado where built-in sensors automatically start the hand dryer. As the hands are gradually removed, moisture is blown off both sides simultaneously by the high-speed stream of air. The airflow stops automatically when the hands are removed, reinforcing the energy-efficiency theme.

The Tornado's auto sensors start the drying process and shut off automatically if not in use.

### 'Green Spot' credentials

With the option of either blowing hot or cold air through the drying jets, the TORNADO 2 800W unheated mode has one of the lowest power consumptions in its class. Even in heated mode, the 1900W power consumption is comparable to unheated models.

Both the TORNADO 2 and the TORNADO SELECT achieve our 'Green Spot' accreditation through their low power consumption, fast drying speed and auto shut-off features and offer great eco-credentials.
